TORRRRRRRRRRRRRR

Task 1 Unit 1 – Tor

Run apt-get install tor to install/update your Tor packages

Run service tor start to start the Tor service

Run service tor status to check Tor's availability
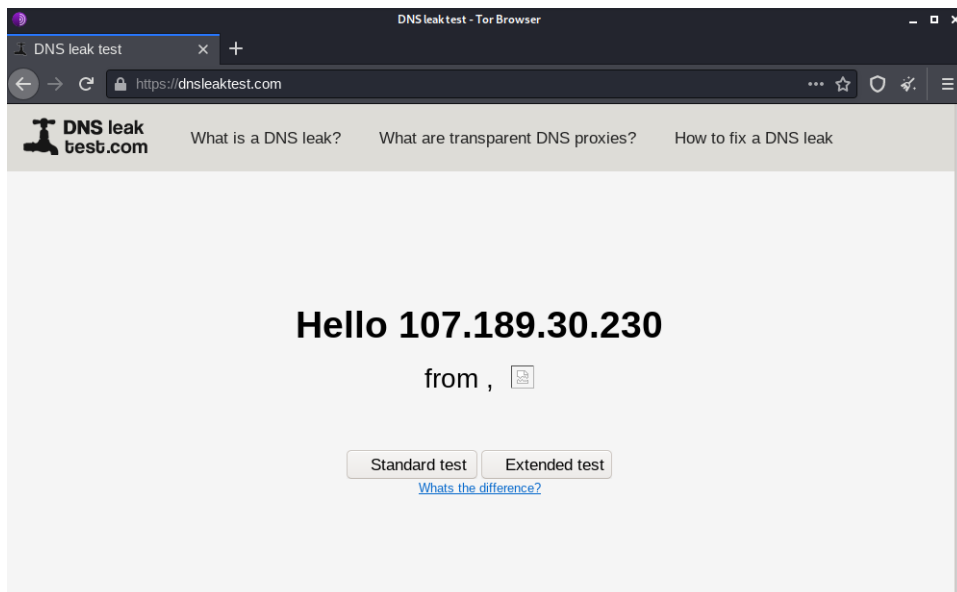

Run service tor stop to stop the Tor service

Task 2 Unit 2 – Proxychains

apt install proxychains to install/update proxychains tool

Run nano /etc/proxychains.conf to edit the settings

Start the TOR service and run proxychains firefox. Usually, you are required to put 'proxychains' command before anything in order to force it to transfer data through Tor.

Check on dnsleaktest.com , the ip was changed diffirent with my public ip

Task 3 Unit 3 - Tor browser

Go to the website through Tor browser and get the bitcoin address to resolve the question

Hello, my name is Daniel and this is my personal website, that I develop in my free time. This site is available as Tor hidden service or via my clearnet proxy danwin1210.me.

This is just the landing page, you can navigate to the pages that interest you most by clicking on the entries in the navigation bar on the left.

You can download my PHP Chat based on LE-CHAT on GitHub. The onion link list script is now also available for download on GitHub. The setup I use for hosting is now also available on GitHub.
